Attorney's Docket: 2002JP318

Serial No.: N/A

Art Unit N/A Preliminary Amendment prior to Examination

This listing of claims will replace all prior versions, and listings, of claims in the

application:

1.(Original) A coating solution comprising a polysilazane having a Si-H bond, a

diluting solvent, and a catalyst.

The coating solution according to Claim 1, wherein the 2.(Currently Amended)

diluting solvent is selected from the group consisting of a petroleum solvent, an

aromatic solvent, [[or]] an alicyclic solvent, an ether, a halogenated hydrocarbon,

[[or]] a terpene mixture, and mixtures thereof or a mixture of those solvents is used

as the diluting solvent.

3.(Currently Amended) The coating solution according to Claim 2 of claim 1,

wherein the diluting solvent is selected from the group consisting of a paraffin [[type]]

solvent, a mineral spirit, a terpene mixture, mixtures or an ether, and mixtures

thereof or a mixture thereofis used as the diluting solvent.

4.(Currently Amended) The coating solution of claim 1 according to Claim 3,

wherein the diluting solvent is selected from the group consisting of dibutyl ether,

dimethyl ether, diethyl ether, polyglycol ether, [[or]] tetrahydrofurane [[or a mixture]]

and mixtures thereof is used as the diluting solvent.

3

Attorney's Docket: 2002JP318

Serial No.: N/A

Art Unit N/A

Preliminary Amendment prior to Examination

The coating solution of claim 1 according to any one of 5.(Currently Amended) Claims 2 to 4, wherein the diluting solvent further comprises one or more of solvents selected from the group consisting of xylene, methylcyclohexane, [[and]] ethylcyclohexane, and mixtures thereof.

The coating solution of claim 1 according to any one of 6.(Currently Amended) Claims 1 to 5, wherein the concentration of the polysilazane having a Si-H bond is 0.1 to 35% by weight of said coating solution.

The coating solution of claim 1 according to any one of 7.(Currently Amended) Claims 1 to 5, wherein the concentration of the polysilazane having a Si-H bond is 0.5 to 10% by weight of said coating solution.

8.(Currently Amended)The coating solution of claim 1according to any one of Claims 1 to 7, wherein the catalyst is contained in an amount of 0.01 to 30% by weight based on [[a]] pure polysilazane [[content]] having a Si-H bond.

The coating solution of claim 1according to any one of 9.(Currently Amended) claims 1 to 8, wherein the catalyst is selected from the group consisting of an Nheterocyclic compound, an organic acid, an [[or]] inorganic acid, a metal carboxylate, an acetylacetona complex, fine metal particles, an peroxide, a metal chloride, [[or]] an organometallic compound, and mixtures thereof.

Attorney's Docket: 2002JP318

Serial No.: N/A

Art Unit N/A

Preliminary Amendment prior to Examination

10.(Currently Amended) The coating solution of claim 1 according to any one of claims 1 to 9, wherein the polysilazane having a Si-H bond is an inorganic polysilazane synthesized by reacting SiH<sub>2</sub>Cl<sub>2</sub> with a base to form an adduct of SiH<sub>2</sub>Cl<sub>2</sub> and then reacting the adduct of SiH<sub>2</sub>Cl<sub>2</sub> with ammonia.

11.(Currently Amended) The coating solution of claim 1 according to any one of claims 1 to 9, wherein the polysilazane having a Si-H bond is a polysilazane synthesized by reacting SiH<sub>2</sub>Cl<sub>2</sub> and CH<sub>3</sub>SiHCl<sub>2</sub> with a base to form adducts of SiH<sub>2</sub>Cl<sub>2</sub> and CH<sub>3</sub>SiHCl<sub>2</sub> and then reacting the adducts of SiH<sub>2</sub>Cl<sub>2</sub> and CH<sub>3</sub>SiHCl<sub>2</sub> with ammonia.

12.(Currently Amended) A method for improving at least one characteristic of a surface of a base material, said method comprising applying a coating to said surface, said coating comprising the coating solution of claim 1, said characteristic of the base material selected from the group consisting of Use of the coating solution according to any one of the claims 1 to 11 for the coating of surfaces of a base material to enhance the anti-corrosion resistance, abrasion resistance, anti-fouling properties, easy-to-clean properties, wetting properties to [[the]] water, sealing effect, chemical resistance, anti-oxidation, physical barrier effect, heat resistance, fire resistance, low shrinkage, UV-barrier effect, smoothening effect, durability effect, antistatic properties, [[and]] anti-scratch characteristics, and combinations thereof ef the surfaces of the base materials of products or articles.

Serial No.: N/A

Art Unit N/A

Preliminary Amendment prior to Examination

13.(Currently Amended) Use according to The method of claim 12, wherein the coating solution is applied to the surface of the base material in combination with a primer.

14.(Currently Amended) The method of claim 12 Use according to claim 12 and/or 13, wherein the surface has been coated with a surface coating selected from the group consisting of a lacquer, a varnish, a paint and combinations thereof laquers, varnishes or paints prior to the application of the coating solution.
